## A Word from "Nozzle Guy"!

Technology can be both good...and bad. Cell phones help us keep in touch, but using them in a movie theatre, or at the dinner table is rarely appropriate. They don't seem to mix well with driving a car either.

E-mail is another tool that can be frustrating. It sometimes takes 10 E-mails back and forth to handle something that could have been solved in one short phone call.

All that being said, AXXO is taking another big leap...check out our new website, and let us know what you think!

## NEW! Air Wisk™

BEX offers it's new Air Wisk made from durable ABS plastic. You can see the Air Wisk and all BEX products in their newly released Catalog 54. Contact AXXO today to obtain a free copy of Catalog 54.

Quiet!  
Durable!

## Sonic Rotary Air Knife Finding Dramatic Success!

The Sonic Rotary Air Knife is proving time and time again to solve difficult part drying, with a minimal amount of horsepower.

Because the unit can rotate from 10-200rpm, it can offer numerous passes over slow-moving and stationary parts.

Both floor space and horsepower are dramatically reduced since one Rotary Knife replaces multiple stationary air knives.

## Maintenance Tips...

### INSPECT YOUR EQUIPMENT!

*"An apple a day keeps the doctor away."*

A customer recently told me that they were concerned because their system was running almost 3 times the life they expected. All they do is REGULAR INSPECTION, cleaning, and changing filters to make sure they never lose system performance. Just like visiting your dentist, or having an annual physical, routine inspection of your process equipment (nozzles, filters, hoses, belts) will provide the optimum useful life. Lack of inspection and neglected maintenance almost always leads to premature failure, and chronic issues with your equipment. So inspect your equipment routinely and like "an apple a day...", it will provide performance to a ripe old age.
